

WHAT IS CLAIMED IS:

1. A laser pointer mounted on a seat of a firearm as an auxiliary sight, comprising:
a cylindrical housing comprising a forward aperture;
5 a light emitting mechanism within the housing, the light emitting mechanism having a forward end fastened in the housing, the light emitting mechanism being adapted to emit light through the aperture to impinge on a target; and
an adjustment ring rotatably put on the housing, the adjustment ring comprising an eccentric bore with a rear portion of the light emitting mechanism received therein.
- 10 2. The laser pointer as claimed in claim 1, wherein the adjustment ring further comprises a positioning fastener therethrough urged the housing for fastening the corrected adjustment ring.
3. The laser pointer as claimed in claim 1, wherein the adjustment ring further comprises a rear narrow shoulder.
- 15 4. The laser pointer as claimed in claim 1, wherein the housing further comprises a bore for fastening the light emitting mechanism.
5. The laser pointer as claimed in claim 1, wherein the adjustment ring further comprises an outer knurled ring put on the housing, and an inner cam ring put on the housing, the cam ring comprising a projection on its outer surface secured to the knurled
20 ring.
